Election Requirement

Applicant argues that the claims should have been separated into only two groups - I, II. Examiner disagrees with Applicant since the instant claim groups require different search strategy, and moreover, the reference applied to one group would most likely not read all groups. For this reason the restriction requirement will be maintained and is final. Applicant elected two antibiotic, vancomycin and ampicillin. However, the claims are only directed to the selection of a single antibiotic. Of the two which were chosen, Examiner will examine vancomycin as the elected antibiotic. The restriction / election requirement is maintained and is final.

Claim Rejection under 35 U.S.C. 103(a)

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1 and 25-27 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tomita et al (US 5656591; 8/12/97). Tomita teaches a method of combining vancomycin and citric acid or salt thereof to form an antimicrobial agent composition. See abstract, column 3 lines 1-12, column 4 line 54 - column 5 line 9, column 13 lines 5-47. Tomita teaches topical compositions. See columns 26 -28. Tomita differs from the instant claims in that Tomita does not teach the instant invention comprising at least 1% by weight citric acid or salts thereof. However,

Art Unit: 1616

one having ordinary skill in the art would have been expected to determine the optimum amount of citric acid or salt thereof. One would have been motivated to do this in order to enhance the overall effectiveness of the antimicrobial composition.
